| Section / Batch: | CSE-AI                                                                                                                                                   | Date:         | 15/07/26                                   |

### Code of Conuct

*I M. BHAVANA [192472252] certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.*

Signature of the Student: M. BHAVANA

### Instructions

- Suggested Team Member Roles (3 Members)
- Member 1: Theory, Concepts, and Literature Review
- Member 2: Algorithm Design, Models, and Technical Analysis
- Member 3: Demonstration, Case Study, Applications, and Conclusion
- GPS photo must submit.
- Duration: 30 minutes.

| Section / Topic                                                                 | Focus                                           | Q Nos |
|---------------------------------------------------------------------------------|-------------------------------------------------|-------|
| Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP | NLP Models, Language Processing Evolution       | TP-01 |
| Comparative Study of NLP Models and Algorithms                                  | Model Analysis, Algorithm Comparison            | TP-02 |
| Regular Expressions for Real-World Text Processing                              | Pattern Matching, Information Extraction        | TP-03 |
| Designing Efficient Regular Expression Patterns for Information Extraction      | Text Mining, Data Extraction Techniques         | TP-04 |
| Finite State Automata in Natural Language Processing                            | State Transitions, Language Recognition         | TP-05 |
| Building a Finite State Automaton for Token Recognition                         | Lexical Analysis, Token Validation              | TP-06 |
| Morphology and Word Formation in Natural Languages                              | Morpheme Analysis, Word Structure Processing    | TP-07 |
| Inflectional Morphology: Understanding Grammatical Variations                   | Grammatical Analysis, Word Normalization        | TP-08 |
| Derivational Morphology and Vocabulary Expansion                                | Word Generation, Semantic Transformation        | TP-09 |
| Comparative Analysis of Inflectional and Derivational Morphology                | Morphological Classification, Language Analysis | TP-10 |

|                                                                               |                                                |       |
|-------------------------------------------------------------------------------|------------------------------------------------|-------|
| Finite-State Morphological Parsing Techniques                                 | Morphological Parsing, Finite-State Processing | TP-11 |
| Morphological Analysis for Indian Languages                                   | Language-Specific Morphology, NLP Challenges   | TP-12 |
| Porter Stemmer: Design, Working Mechanism, and Applications                   | Stemming Algorithms, Text Preprocessing        | TP-13 |
| Stemming vs Morphological Parsing: A Comparative Study                        | Word Reduction, Morphological Processing       | TP-14 |
| Integrated NLP Pipeline: From Regular Expressions to Morphological Processing | End-to-End Language Processing Pipeline        | TP-15 |

## Annexure A – Technical Presentation

| Team No. | Technical Presentation Title                                                    | Description                                                                                                                                                           |
|----------|---------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1        | Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP | Analyze the historical development of NLP models, key milestones, and how language processing has evolved from handcrafted rules to intelligent systems.              |
| 2        | Comparative Study of NLP Models and Algorithms                                  | Explore different NLP models and algorithms used for language processing, comparing their working principles, strengths, and limitations.                             |
| 3        | Regular Expressions for Real-World Text Processing                              | Demonstrate how regular expressions are used for data validation, text extraction, log analysis, and information retrieval in practical applications.                 |
| 4        | Designing Efficient Regular Expression Patterns for Information Extraction      | Analyze complex regular expression patterns used to extract emails, phone numbers, URLs, dates, and structured information from unstructured text.                    |
| 5        | Finite State Automata in Natural Language Processing                            | Explain the concepts of deterministic and non-deterministic finite automata and their role in lexical analysis and language recognition.                              |
| 6        | Building a Finite State Automaton for Token Recognition                         | Design and demonstrate a finite state automaton that recognizes tokens such as identifiers, keywords, and numbers in textual data.                                    |
| 7        | Morphology and Word Formation in Natural Languages                              | Investigate how words are structured and formed using morphemes, and analyze the importance of morphology in NLP systems.                                             |
| 8        | Inflectional Morphology: Understanding Grammatical Variations                   | Examine how inflectional changes affect word forms based on tense, number, gender, and case across different languages.                                               |
| 9        | Derivational Morphology and Vocabulary Expansion                                | Analyze derivational processes that create new words and study their impact on semantic interpretation and language understanding.                                    |
| 10       | Comparative Analysis of Inflectional and Derivational Morphology                | Compare the characteristics, applications, and challenges of inflectional and derivational morphology in NLP tasks.                                                   |
| 11       | Finite-State Morphological Parsing Techniques                                   | Explore finite-state transducers and parsing techniques used to analyze and generate morphological structures in natural languages.                                   |
| 12       | Morphological Analysis for Indian Languages                                     | Study the challenges and solutions involved in performing morphological processing for morphologically rich Indian languages such as Tamil, Hindi, and Telugu.        |
| 13       | Porter Stemmer: Design, Working Mechanism, and Applications                     | Analyze the Porter Stemming algorithm, its rule-based approach, implementation steps, and role in information retrieval systems.                                      |
| 14       | Stemming vs Morphological Parsing: A Comparative Study                          | Compare stemming and morphological parsing techniques based on accuracy, computational complexity, and application scenarios.                                         |
| 15       | Integrated NLP Pipeline: From Regular Expressions to Morphological Processing   | Demonstrate a complete NLP preprocessing pipeline incorporating regular expressions, finite state automata, stemming, and morphological analysis for text processing. |

## Rubrics for Calculation

# INTRODUCTION

## What is a Regular Expression (Regex)?

- A Regular Expression (Regex) is a sequence of characters used to search and match patterns in text.
- It helps computers identify specific text formats quickly.
- Regex is an important text preprocessing technique in Natural Language Processing (NLP).
- It is widely used for extracting information from unstructured text.

## Regular Expressions in NLP (RegEx)

Understanding Patterns, Functions, and Practical Examples

## What Are Regular Expressions?

- A sequence of characters that forms a search pattern.
- Used for pattern matching in NLP, data cleaning, and extraction.

Engineer to Excel

**Example:**  
**Input:**  
Email: student456@yahoo.com  
Phone: 9876543210

**Output:**  
Email → student456@yahoo.com  
Phone → 9876543210

## Real-World Applications of Regex

- Email Extraction
- Phone Number Detection
- URL Detection
- Date Extraction
- Password Validation
- Data Cleaning

# Working Process

## Regex Working Flow

# Advantages & Limitations

## Advantages

- Fast processing
- Easy to learn
- High accuracy for pattern matching
- Saves time
- Useful in NLP preprocessing

## Limitations

- Cannot understand sentence meaning
- Complex patterns are difficult to create
- Cannot detect context or emotions
- Works only on predefined patterns

## How the Regex Pattern Works

**Status:** Processing Successful

# CONCLUSION

- Regex is one of the simplest and most effective text-processing techniques in NLP.
- It helps identify, validate, and extract important information from text.
- It is widely used in search engines, data mining, and information retrieval.
- Regex is an essential skill for every NLP developer.

THANK YOU
